Automation

Panels may be input and output from the front or side of the GEMINI, and output with the same options. This can either be done by an operator, or by a conveyor.

Automation reduces the need for operators, this is obvious. A more important advantage, however, is improved imaging quality: every time an operator puts his hands into the imaging chamber to load, flip or unload a panel, contamination and handling defects are introduced. Automation means better yields.

- Reduced staff requirements
- · Higher throughput and repeatability
- Completely sealed imaging chamber, class 1,000 inside
- Flexibility: multiple jobs and lots can be mixed and run together

BOARD STATION: all-digital workflow management

Since LDI is an expensive and crucial piece of capital equipment, its utilization must be maximized. An all-digital workflow requires all-digital workflow management: BOARDSTATION.

BOARDSTATION stores all information in a database: job info, progress info, queue info, LDI machine status, job in progress, priorities.BOARDSTATION can manage the workflow of the whole department, change priorities, reroute jobs, and check machines. Data can be input from any CAM system.

User access is via the ubiquitous browser. BOARDSTATION is accessible from everywhere over the company network if you have the proper access rights, if desired even over the Internet: Barco service personnel could then review your LDI machine error log over the Internet.

- · Multi-level user interface creates different security levels
- Variable customer info printed on each panel
- Manages the entire digital workflow

System architecture

- · Open laser source platform
- · Open architecture guarantees future upgrade flexibility
- Vibration-free design secures optimum image quality
- Smart design optimizes quick serviceability

Main Specifications
